No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 16, 1

Patent No. 6194388
GENERAL INFORMATION:
APPLICANT: Archur M. Krieg, M.D.
TITLE OF INVENTION: IMMUNOMODULATORY OLIGONUCLEOTIDES
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
STREET: 600 STATE STREET, SUITE 510
APPLICANT: Arthur M. Krieg, M.D.

GENERAL INFORMATION:
APPLICANT: Watieg, Arthur M.
TITLE OF INVENTION: Immune System Using Immunotherapeutic Oligonucleotides and TITLE OF INVENTION: Immune System Using Immunotherapeutic Oligonucleotides and TITLE OF INVENTION: Cytokines
TITLE OF INVENTION: Cytokines
FILE OF INVENTION: UNBER: US/09/286,098
CURRENT FILING DATE: 1999-04-02

BARLIER APPLICATION NUMBER: US 60/080,729

BARLIER FILING DATE: 1998-04-03

NUMBER OF SEQ ID NOS: 105

SOFTWARE: FBSESEQ for Windows Version 3.0

SEQ ID NO 41

LENGTH: 15
                                                                                                                                                                            VB-09-5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WS-013-25-193A-5

WS-09-325-193A-5

Sequence 5, Application US/09325193A

Patent No. 6406705

GENERAL INFORMATION:

APPLICANT: Davis, Heather L.

APPLICANT: Schorr, Joachim

TITLE OF INVENTION: Unmethylated CpG Dinucleotide as an Adjuvant

TITLE OF INVENTION: Unmethylated CpG Dinucleotide as an Adjuvant

FILE REFERENCE: C1039/7025/HCL

CURRENT APPLICATION NUMBER: US/09/325,193A

CURRENT FILING DATE: 1999-06-03

PRIOR FILING DATE: 1998-09-16

PRIOR APPLICATION NUMBER: US 09/154,614

PRIOR APPLICATION NUMBER: US 09/154,614

PRIOR APPLICATION NUMBER: US 06/040,376
                                                                                                                                                                              PREERL INFORMATION:
APPLICANT: Krieg et al.,
TITLE OF INVENTION: IMMUNOSTIMULATORY NUCLEIC ACID MOLECULES

US-09-191-170-5

Sequence 5, Application US/09191170

Patent No. 6429199

GENERAL INFORMATION:

APPLICANT: Krieg, Arthur M.

APPLICANT: Hartmann, Gunther

TITLE OF INVENTION: Immunostimulatory Nucleic Acid Molecules

TITLE OF INVENTION: for Activating Dendritic Cells

FILE REFERENCE: C1039/70117

CURRENT APPLICATION NUMBER: US/09/191,170

CURRENT FILING DATE: 1998-11-13

EARLIER FILING DATE: 1999-10-30

EARLIER APPLICATION NUMBER: US 08/738,652

EARLIER APPLICATION NUMBER: US 08/738,652

EARLIER PILING DATE: 1995-02-07

EARLIER PILING DATE: 1995-02-07

EARLIER FILING DATE: 1994-07-15

NUMBER OF SEQ ID NOS: 99

SOFTWARE: FastSEQ for Windows Version 3.0

SEGTWARE: 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 15; DB 3; Length 15; 100.0%; Pred. US-09-949-016-94275

Sequence 94275, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF.

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR PLICATION NUMBER: 60/231,768

PRIOR PLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-10-03

PRIOR PLILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTHARE: PESELSEQ for Windows Version 4.0

SEG ID NO 94275

LENGTH: 601
                                                                         FACENTIAL NO. 191539

```
AAY27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXIGGXXN2 3', where at least one uncleotide separates consecutive CpGs, X1 is adenine, guanthe, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer OR 5' NIXIZCGXXXN3 3', where at least one nucleotide separates consecutive CpGs, X1 and X2 are selected from CGC or CGG tetramer or cpf, GpG, GpA, ApT and ApA, X3 and X4 are selected from TpT or CpT, N1 is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 consecutive CpGs x1 and none CCG or CGG trimer. The ODNs activate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other cells to produce Th1 cytokines, including IL-12, IFN-gamma and GM-CSF).

The ODNs can be used to treat or prevent an asthmatic disorder, adjuvant during antibody generation in a mammal such as a mouse or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                      Immunostimulatory, oligodeoxyribonucleotide, ODN;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents an unmethylated CpG dinucleotide, and can be used in the method of the invention. The method is for treating a subject having, or at risk of having an acute decrement in air flow, comprising administering a nucleic acid sequence containing at least one daministering a nucleic acid sequence containing at least one containing at least one unmethylated CpG. The nucleic acids containing an unmethylated CpG. The realistic acids subject by activating natural killer cells (NK) or redirecting monocytic and other cells to produce Thic cytokines. They can be used to treat pulmonary discders having an immunologic component, such as asthma or environmentally induced airway disease. They can also be used to treat disease associated with Grampositive bacterial infections or endotoxaemia including bacterial commingitis, neonatal sepsis, cystic fibrosis, inflammatory bowel disease and liver cirrhosis, Gram-negative pheumonia, Gram-negative abdominal abscess, haemorrhagic shock, disseminated intravascular coagulation, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                          natural killer cell activation; immune response; bacterial meningitis; putural killer cell activation; NK cell; Th2 response; neonatal sepsis; pulmonary disorder; asthma: envixonmentally induced airway disease; bacterial infection; endocoxaemia; therapy; cystic fibrosis; inflammatory bowel disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of nucleic acids containing an unmethylated CpG - for treating a subject having or at risk of having an acute decrement in air flow or inhibiting an inflammatory response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

```
AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NAXIGCSAN2'3', where at least one uncleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 cr GG trimer OR 5' NXIX2GG3X4N 3', where at least cor more than one CGG or GG trimer OR 5' NXIX2GG3X4N 3', where at least one nucleotide separates consecutive CpGs, X1 and X2 are selected from GpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 consent or contain a CGG tetramer or more than one CCG or CGG trimer. The CONS activate lymphocytes in a subject and redirect a subject's immune CONS activate lymphocytes in a subject and redirect a subject's immune CCC response from a Th2 to a Th1 (e.g. by inducing monocytic cells and other CCC cells to produce Th1 cytokines, including In-12, IFN-gamma and GM-CSF).

CT he ODNs can be used to treat or prevent an asthmatic discases, in desensitisation therapy, as an artificial
                                                                                                                                                                                                                                                                                                                                                   New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunostimulatory; oligodeoxyribonucleotide; ODN; unmethylated CpG dinucleotide; activate; lymphocyte; immune response; Th2; Th1; cytokine; treatment; prevention; asthma; autoimmune disease; desensitisation therapy; artificial adjuvant; antibody generation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunostimulatory oligodeoxyribonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100.0%; Score 15; DB 2; Length 15; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ANY27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: 5' NIXXCGX2N2 3', where at least one nucleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or one nucleotide separates consecutive CpGs, X1 and X2 are selected from CpT, GpG, GpA, ApT and ApA, X3and X4 are selected from TpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer. The Cobs activate lymphocytes in a subject and redirect a subject's immune cobs activate lymphocytes in a subject and redirect a subject's immune cobs activate lymphocytes in a subject and redirect a subject's immune cells or produce Th1 cytokines, including II-12, IFV-Samma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic disorder, autoimmune diseases, in desensitisation therapy, as an artificial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease;

                                                                                                                                                              AAV27641-751 represent immunostimulatory oligodeoxyribonucleotides (ODNs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula: $\tilde{S}$ NIXICGXN2 3.\tilde{Y}$, where at least one nucleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer OR 5' NIXIZCGX3X4N 3', where at least one nucleotide separates consecutive CpGs, X1 and X2 are selected from CpT or CpT, N is any nucleotide and N1+N2 is 0-26 bases with the provision that N1 and N2 does not contain a CCGG tetramer or more than one CCG or CGG trimer. The ODNs activate lymphocytes in a subject and redirect a subject's immune response from a Th2 to a Th1 (e.g. by inducing moncoytic cells and other cells to produce Th1 cytokines, including IL-12, IFN-gamma and GM-CSF). The ODNs can be used to treat or prevent an asthmatic disorder, autoimmune diseases, in desensitisation in a mammal such as a mouse or a

Sequences AAZ41856-Z41949 are phosphorothioate CpG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating administering to a subject exposed to an antigen, an immunopotentiating cytokine and an immunostimulatory CpG oligonuclectide to immunopotentiating cancer by stimulating an antigen specific immune response. The methods are useful for treating cancer antigen. The methods can also be used to treat cancer antigen. The methods can also be used to treat carcinoma, fibroma, inhumanes, including but not limited to: sarcoma, carcinoma, fibroma, inhumanes, including but not limited to: sarcoma, carcinoma, fibroma, inhumanes, including but not limited to: sarcoma, carcinoma, fibroma, used to useful for treating infectious diseases, e.g. and glioma. The methods are also useful for treating infectious diseases. The methods may also be used to treat allergic diseases, e.g. asthma. The methods and compositions may also be applied to treat cancer and tumours of non human subjects, e.g. cats and dogs. Neoplasias affecting agricultural livestock may also be treated and include leuksemia, haemangiopericytoma and bovine ocular neoplasia. Chronic, infectious, contagious diseases of sheep and goats caused by the bacterium of sheep caused by jaagsiekte may also be treated. CpG oligonucleotides can be useful in activating B cells, and contagious lung tumour of such as monocytes and macrophages. CpG oligonucleotides can be useful in activating B cells, and contagious lung tumour in custul and compositions in the presenting cells and macrophages. CpG oligonucleotides entabods custom and bovine observed on an include sentiating contagions of the pactorium and bovine observed on an include sentiating contagions diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CpG oligonuclectide; phosphorothicate; interleukin-12; IL-12; secretion; human PBMC; immune response; cancer; HIV; bacterial disease; asthma; neoplastic disorder; jaagsiekte; B cell; NK cell; ss; cytokine; antigen presenting cell; infection; allergic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAZ41856-Z41949 are phosphorothioate CpG oligonucleotides which are used in the invention comprises stimulating an immune response in a subject comprising administering to a subject exposed to an antigen, an immunopotentiating cytokine and an immunostimulatory CpG oligonucleotide to induce a synergistic antigen specific immune response. The methods are useful for treating cancer by stimulating an antigen specific immune response against a cancer antigen. The methods can also be used to treat neoplastic disorders in humans, including but not limited to: sarcoma, carcinoma, fibroma, Lymphoma, melanoma, neuroblastoma, retinoblastoma, and glioma. The methods are also useful for treating infectious diseases, and glioma be used to treat also useful for treating infectious diseases.

Carcinoma, The methods are also useful for treating infectious diseases.

Carcinoma, and slose used to treat allergic diseases, and fungal diseases.

Carcinoma and slose used to treat allergic diseases, and tumours contominant subjects, e.g. cats and dogs. Neoplasias affecting contural livestock may also be treated and include leukaemia, haemanglopericytoma and bovine ocular neoplasia. Chronic, infectious, contagious diseases of sheep and gate caused by the bacterium contagious diseases of sheep and gate caused by the bacterium contagious diseases of sheep and gate caused by the bacterium contagious diseases of sheep and gate caused by the bacterium caused by jasquiskte may also be treated. CpG oligonucleotides can be useful in activating B cells, NK cells, and antigous presenting cells, custuch as monocytes and macrophages. CpG oligonucleotides enhance antibody such as monocytes and macrophages. CpG oligonucleotides cantibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                              Novel synergistic combinations of immunostimulatory oligonucleotides and immunopotentiating cytokines are useful for stimulating the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunostimulatory; stereoisomer; CpG oligonucleotide; Th2; Th1; asthma; allergic reaction; allergen; cancer antigen; cancer; immunoinhibitory; inflammatory disease; inflammatory bowel disease; autoimmune disease; gingivitis; psoriasis; sepsis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    such as monocytes and macrophages. CpG oligonucleotides enhance antibod dependent cellular cytotoxicity and can be used as an adjuvant in conjunction with tumour antigens to protect against a tumour challenge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleotide sequence of an immunostimulatory CpG oligonucleotide.

AAZ60933-Z61015 represent immunostimulatory stereoisomers of CpG
coligonucleotides. The sequences are derived from generic nucleic acid
sequence, from which immunoinhibitory sequences may also be derived. The
immunostimulatory nucleic acids can be co-administered with an antigen to
induce an antigen-specific immune response. The immunostimulatory nucleic
acids can also be used in methods for redirecting a subject is immune
response from a Th2 to a Th1, for treating asthma, for desensitising a
cubject against the occurrence of an allergic reaction in response to
contact with an allergen, for activating an immune cell, especially a
tymphocyre or a dendritic cell expressing a cancer antigen or for
treating cancer. The immunoinhibitory nucleic acid can be used to prevent
an immune response, especially where the immune response in the subject
an immune response, especially where the immune sesponse in the subject
is excessive due to having received an immune attimilating compound. The
immunoinhibitory nucleic acid can be used to treat a subject having or at
tisk of an inflammatory disease, especially inflammatory bowel disease,
autoimmune disease, gingivitis, psoriasis and sepsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of CpG containing oligonucleotides for, e.g. inducing an antigenspecific immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Haematopoiesis; regulation; CpG oligonucleotide; phosphorothioate; immune remodeling; thrombopoiesis; anaemia; immune system; cancer; immune sesponse; allergic reaction; infectious disease; asthma; thrombocytopaenia; immunchaemolytic disorder; genetic disorder; haemoglobinopathy; kidney failure; chronic inflammatory disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                Immunostimulatory and immunoinhibitory stereoisomers of CpG oligonucleotides useful for immunotherapy of cancer.

                                                                                                                                                                   The intercolled. The method can be used to inducting an immune response against an antigen such as cells, cell stracts, proteins, carbohydrate, viral extracts, viruses, lipids, glycolipids, carbohydrate, viral extracts, viruses, bacteria, fungi, parasaltes and allergies. It can be used in a subject at risk of developing cancer or an allergie reaction. It can also be used for treating an infectious disease, allergic diseases and asthma, as well as thrombocytopaenia which is drug-induced, due to an autoimmune disorder such as idiopathic thrombocytopenic purpura, or resulting from accidental or therapeutic radiation exposure. It can also be used for treating anaemia such as drug cinduced anaemia, immunohaemolytic disorder, genetic disorders such as haemoglobinopathy and inherited haemolytic anaemia, inadequate production despite adequate iron stores, chronic disease such as kidney failure, and chronic inflammatory disorder such as rheumatoid arthritis, or anaemia centricial and an accidental or therapeutic radiation exposure. AAZ48029 represent phosphorothicate CpG oligonucleotides used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                      The present invention describes a method using CpG containing oligonucleotides (ONB) for regulating immune system remodeling and for regulating had method for inducing an antigen-specific immune response comprises: (1) administering an ON having a sequence including at least the formula (1); and (2) exposing the subject to an antigen at least 3 days after the ON is administered to the subject to produce an antigen-specific immune response: 5' XICGX2 3' (1), where the ON = includes at least 8 nucleotides; C and G = unmethylated, and X1 and X2 = nucleotides. The method can be used for inducing an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Haematopoiesis, regulation, CpG oligonucleotide, phosphorothioate, immune remodeling; thrombopoiesis, anaemia; immune system, cancer, immune response, allergic reaction, infectious disease, asthma; thrombocytopaemia; immunchaemolytic disorder, genetic disorder; haemoglobinopathy; kidney failure, chronic inflammatory disorder;

The present invention describes a method using CpG containing
cligonucleotides (ONs) for regulating immune system remodeling and for
cegulating haematopolesis. The method for inducing an antigen-specific
immune response comprises: (1) administering an ON having a sequence
including at least the formula (1); and (2) exposing the subject to an
antigen at least 3 days after the ON is administered to the subject to an
antigen at least 3 days after the ON is administered to the subject to an
consideration of the method can be used for inducing an immune response
consideration an entigen such as cells, cell extracts, proteins,
colysaccharides, polysaccharide conjugates, lipids, glycolipids,
carbohydrate, viral extracts, viruses, bacteria, fungi, parasites and
allergic reaction. It can also be used for treating an infectious
callergic reaction. It can also be used for treating an infectious
disease, allergic diseases and asthma, as well as thrombocytopaenia which
is drugi-induced, due to an autoimmune disorder, spenetic disorders such as sidopathic
chrombocytopenic purpura, or resulting from accidental or therapeutic
chrombocytopenic intpurpura, or resulting from accidental or therapeutic
chrombocytopenic, immunohaemolytic disorder, genetic disorders such as
chadiation exposure. It can also be used for treating anaemia such as despite adequate iron stores, chronic disease such as kidney failure, and
chronic inflammatory disorder such as rheumatorid arthritis, or anaemia
chromic inflammatory disorder such as rheumatorides used in the
chronic chromic despite accidental or therapeutic radiation exposure. Addition of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mucosal immunity; immunostimulatory; CpG motif; immune response; antigen; allergic reaction; cancer; infectious disease; asthma; eczema; allergic rhinitis; coryza; hay fever; conjunctivitis; bronchial asthma; urticaria; food allergy; atopic condition; mucosal delivery; ss.
                                                            Use of CpG containing oligonucleotides for, e.g. inducing an antigen-
specific immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                AAZ47628
                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                            ò
                                                                                    The present invention describes a method using CpG containing cliganucleotides (ONS) as adjuvants for inducing an immune response. The method for inducing a mucosal immune response (MIR) comprises: (1) addinistering to a mucosal immune response (MIR) comprises: (1) addinistering to a mucosal surface of a subject an ON, having a sequence including at least the formula (1); and (2) exposing the subject to an artigen to induce the MIR, where the antigen is not encoded in a nucleic acid vector: S/XIX2CGX3X43' (1), where C and G = unmethylated, and X1, C X2, X3 and X4 = nucleotides. The method can be used for treating a subject at risk of developing an allergic reaction, cancer or infectious crantering sthmatic subject at risk of developing an allergic reaction, cancer or infectious crantering asthmatic subject second from infectious organisms such as infectious bacteria, viruses, caring swine, feline, swine, aduatic or avian species. The ONS act as potent mucosal adjuvants to induce immune responses at both local and remote sites against an antigen administered to the mucosal tissue. Both AMA47881 represent examples of immunostimulatory
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunostimulatory oligonucleotides which enhance B cell activation useful for treating an immune system deficiency e.g. cancer.

This sequence represents a B cell stimulatory oligonuclectide. The invention relates to compositions comprising an oligonuclectide (I) with unmethylated guanine and cytosine nuclectides and an antigen in a carrier. The oligonuclectides can be administered to a subject in a composition with an antigen in a carrier to enhance an immune response by composition with an antigen in a carrier to enhance an immune response by and can be used to treat, prevent or ameliorate an immune system conficiency e.g. cancer or a viral, fungal, bacterial or parasitic deficiency e.g. cancer or a viral, fungal, bacterial or parasitic conficiency e.g. cancer or a viral, fungal, bacterial or parasitic conficiency e.g. cancer or a viral, fungal, bacterial or parasitic conficiency e.g. cancer or a viral, fungal, bacterial or parasitic conficiency e.g. cancer or a viral, fungal, bacterial or parasitic conficiency e.g. cancer or a viral, fungal, bacterial or parasitic consed to treat humans or vertebrate animals including dogs, cats, sheep pigs, cows, goats, chickens, mice and monkeys. Preceding chemotherapy of with the immunostimulatory oligonuclectides should be useful for increasing the responsiveness of milignant cells to subsequent chemotherapy. The 840 nucleotide size of the oligonuclectides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for treating and preventing parasitic infection by administration of unmethylated CpG objections. The CpG oligonacleotides are able to stimulate the innate immune system via the activation of immune cells, such as antigen presenting cells, natural killer cells and granulocytes. The CpG pligonacleotides and the method can be used to treat and prevent parasitic diseases, such as malaria, helminth diseases, tick and mites in humans, animals and poultry. The oligonucleotides may be administered in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating and preventing parasitic infections using CpG oligonucleotides.

The present invention describes a method for treating and preventing parasitic infection by administration of unmethylated CpG coligonucleotides. The CpG oligonucleotides are able to stimulate the innate immune system via the activation of immune cells, such as antigen presenting cells, natural killer cells and granulocytes. The CpG coligonucleotides and the method can be used to treat and prevent parasitic diseases, such as malaria, helminth diseases, tick and mites in humans, animals and poultry. The oligonucleotides may be administered in conjunction with parasiticides or other therapeutic compounds after an conjunction with parasiticides or other therapeutic compounds after an conjunction with parasiticides or other therapeutic compounds after an can be treated or prevented include those caused by Plasmodium falciparum, P. ovale, P. malariae, P. vivax, P. knowlesi, Babbesia mirrorism anansoni, Toxoplasma gondii, Trichinella spiralis, Leishmania major, L. donovani, L. braziliensis, and L. tropica. The parasite is
                                                                                                                                                                                                                                                                                                                        ö
conjunction with parasiticides or other therapeutic compounds after an organism has been diagnosed to be infected with parasites. Diseases which can be treated or prevented include those caused by Plasmodium falciparum, P. ovale, P. malariae, P. vivax, P. knowlesi, Babesia microti, B. divergens, Trypanosoma cruzi, T. gambiense, T. rhodesiense, Schierosoma mansoni, Toxoplasma gondii, Trichinella spiralis, Leishmania major, L. donovani, L. braziliensis, and L. tropica. The parasite is especially capable of causing malaria. The present sequence represents a parasitic infection preventing exemplary oligonucleotide sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating and preventing parasitic infections using CpG oligonucleotides.

The present invention describes methods for inducing interleukin 6 (IL-6), interferon-gamma (IRN-gamma) or IL-12, or for stimulating natural killer cell lytic activity. The methods comprise administering to the subject to activity inducing IL-6 in a subject comprising and ansign of the subject to induce IL-6 in the subject comprising administering to the subject to induce IL-6 in the subject comprising activity comprising exposing a natural killer cell to the immunostimulatory nucleic acid; (2) stimulating natural killer cell lytic activity comprising exposing a natural killer cell lytic activity; (3) inducing interferon-gamma in a subject to treat an immune system deficiency comprising administering to the subject to induce cativity; (3) inducing interferon-gamma in a subject comprising administering to the subject the inducing IL-12 in a subject comprising administering to the subject the immunostimulatory nucleic acid. The methods are useful for inducing IL-6, interferon-gamma or IL-12, or stimulating natural killer cell lytic constitution in a subject, particularly a human. The methods are particularly activity in a subject, particularly a human. The methods are particularly cuseful for modulating an immune response. AAH50571 to AAH50671 represent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosineguanine (CpG) dinuclectides and an antigen in a carrier. The present requence is an oligonuclectide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for response to conect with a particular allergen. The immunostimulatory nucleic acids are also useful for necesponse to conect with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject's leukaemia cells are more sensitive to chemotherapy. The compositions are useful for inducing an antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Compositions comprising immunostimulatory molecules which comprise unmethylated CpG dinucleotides useful for ameliorating immune system deficiency, treating leukemia and desensitizing subject against allergic

The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosine-guanine (CpG) dinucleotides and an antigen in a carrier. The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject is leukaemia cells are more sensitive to chemotherapy, The compositions are useful for inducing an antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes an improvement to a method requiring the administration of interferon alpha (IFNalpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonuclectides with phosphorothioate backbones, palindrowes, or G-rich sequences. The agequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a composition comprising an isolated immunostimulatory nucleic acid which comprises unmethylated cytosine-guanine (CpG) dinucleotides and an antigen in a carrier. The present sequence is an oligonucleotide, which was used in the present invention. The immunostimulatory nucleic acids are useful for ameliorating an immune system deficiency (the presence of tumour, cancer or infectious agent) in a subject. The immunostimulatory nucleic acids are also useful for desensitising a subject against the occurrence of an altergic reaction in response to contact with a particular allergen. The immunostimulatory nucleic acids are also useful for vaccination and for treating leukaemia in a subject on administration prior to or in conjunction with a chemotherapy, so that the subject is leukaemia cells are more sensitive to chemotherapy. The compositions are useful for inducing an antigen specific immune response in the subject. The compositions can be also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Compositions comprising immunostimulatory molecules which comprise unmethylated CpG dinucleotides useful for ameliorating immune system deficiency, treating leukemia and desensitizing subject against allergic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to immunomodulatory oligodeoxyribonucleotides (ODNs) containing methylated or unmethylated cytosine-guanine (CpG) dinucleotides. Immunostimulatory ODN compositions lymphocytes and for treating, preventing or ameliorating an immune system deficiency e.g. tumour or cancer or viral, fungal, bacterial or parasitic infection and leukaemia. Neural ODN that contains a methylated CpG dinucleotide are useful for treating diseases such as systemic lupus erythematosus, sepsis and autoimmune diseases. Immunoinhibitory ODN containing CpG dinucleotides that are not in the stimulatory motif and decition and expense of the containing CpG dinucleotides that are not in the stimulatory motif and decition and expense of the containing that an increase it or near both termini have antiviral
                                                                                                                                                                                                                                                                                                                                                                                                    Immunostimulatory composition useful for stimulating immune response in a subject, comprises antigen and immunostimulatory nucleic acid comprising oligonucleotides having unmethylated cytosine-guanine dinucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    activity. The present sequence is an immunomodulatory oligodeoxyribonucleotide (ODN) 1d mutant. This is used to determine whether CpG or non-CpG ODNs causes B cell activation and immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunostimulatory oligonucleotide; B lymphocyte; vaccine; adjuvant;

The present sequence represents a positive control oligonucleotide, which is used to test proliferation of B lymphocytes. The specification describes an immunostimulatory oligonucleotide. This oligonucleotide stimulates proliferation of B lymphocytes. The immunostimulatory oligonucleotide is used in pharmaceuticals for the preparation of human medicines, or as a vaccine adjuvant or compositions, for therapeutic or prophylactic use, and containing one or more antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vaccine, cytostatic, virucidal; bactericidal, fungicidal, anti-parasitic; immunostimulatory; tumour; viral infection; bacterial infection; fungal infection; parasitic infection; cancer; asthma; infections disease; allergy; immune deficiency; phosphorothioate; se.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New immunostimulatory oligonucleotide, useful as a vaccine adjuvant, stimulates proliferation of B lymphocytes.

                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                           The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae, and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vaccine, cytostatic, virucidal, bactericidal, fungicidal, anti-parasitic, immunostimulatory, tumour, viral infection, bacterial infection, fungal infection, parasitic infection, cancer, asthma,
                                                                                Vaccinating against tumors, infectious diseases, allergies and asthma using immunostimulatory Py-rich and TG nucleic acids.

The present invention issues of a minimistering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immunostimulatory. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vaccine; cytostatic; virucidal; bactericidal; fungicidal; anti-parasitic; immunostimulatory; tumour; viral infection; bacterial infection; fungal infection; parasitic infection; cancer; asthma; infection disease; allergy; immune deficiency; phosphorothioate; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vaccinating against tumors, infectious diseases, allergies and asthma using immunostimulatory Py-rich and TG nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immuno response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, reaphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a rich to a thi immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                             ö
against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                Vaccine, cytostatic, virucidal, bactericidal, fungicidal, anti-parasitic,

The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immunos response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, alleryy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       anti-parasitic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccinating against tumors, infectious diseases, allergies and asthma
using immunostimulatory Py-rich and TG nucleic acids.

                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a positive control oligonucleotide, which is used to test proliferation of B lymphocytes. The specification describes an immunostimulatory oligonucleotide. This oligonucleotide stimulates proliferation of B lymphocytes. The immunostimulatory oligonucleotide is used in pharmaceuticals for the preparation of human medicines, or as a vaccine adjuvant or compositions, for therapeutic or prophylactic use, and containing one or more antigens

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytckines; It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas of the brain, lung, ovary, breast, prostate or colon, or carcinomas arcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Bbola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                            form RNA or DNA/RNA hybrids. Thymidine is linked to at least one other base through a ribose sugar"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA/RNA hybrid; phosphorothioate backbone; immunostimulatory; vaccine; infection; allergy; cancer; hypersensitivity; bio-warfare; immunostimulant; antiallergic; cytostatic; antimicrobial; anti-HIV;

                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be useful for enhancing an immune response trumcurs (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA/RNA hybrid; phosphorothioate backbone; immunostimulatory; vaccine; infection; allergy; cancer; hypersensitivity; blo-warfaze; immunostimulant; antiallergic; cytostacic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy;
                                                                                                                                                                                                                                                                                                                            New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.

The composition is useful for enhancing an immune response or inducing cytchines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Boola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                   /*tag= a
